(54) BALL BEARING

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a retainer which is capable of preventing the induction of retainer sound in the retainer used for a ball bearing.

SOLUTION: In the ball bearing having a retainer 50 in which a pocket 1 accommodately holds a rolling element is formed in a plurality of positions in the circumferential direction, the ball bearing is characterized in that the pocket 1 has a recess 3 in the face on the axis direction side of the ball bearing and the rolling element is retained in the pocket 1 without having a contact with the inner surface of the recess 3.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
